

# SPRING HYDRO DRILL 2000

Name \_\_\_\_\_

1. You receive a phone call at 3:00 A.M. The caller identifies himself as the DES Coordinator for Teton County. He states that the dam tender from the dam at Lake Elwell called him and told him that the dam has a minor leak, and that there isn't anything to worry about. That is all the information that was available to him. List the actions that you would take.
2. You look at the river sites on HYDROVIEW. You notice that the triangle at Melrose, on the Big Hole River, is red. What actions do you take?
3. You are working a day shift and notice that the models for the past three days have indicated a strong upper level low developing and moving over southwestern and central Montana just in time for the weekend. Each run has hinted at the event, but at a slower movement. The snowpack has just begun to come out of the mountains. The temperatures had been warm during the day and back down around freezing at night. Temperatures will remain warm during the day but are not forecast to get down near freezing at night. Rivers are running where they should be for the time of year. What product, if any, would you issue? What other actions would you take?
4. In RIVERPRO, there is a FLTGTf statement. What does it mean?

5. When do you issue a FLTGTf statement?
6. When you issue a FLTGTf statement, what header is actually transmitted? (HINT: NO, it is not GTFFLTGTf)
7. At this time, can you issue a product for NOAA WEATHER RADIO transmission using RIVERPRO?
8. Can you look at other river sites in RIVERPRO other than river forecast sites? If yes, explain.
9. You want the paragraphs in your Flood Watch to appear in a different order than the template has them arranged in RIVERPRO. Can you rearrange the order while you are using the template? If yes, explain.
10. Can you rearrange the order of the paragraphs after you are done using the template? If yes, explain.
11. You are done editing the flood watch, and have already sent it out to the rest of the world. You realize that you forgot to include the day the river should be near flood stage. Can you pull that flood watch back up and edit it if no other product has been issued using RIVERPRO since the flood watch was issued?
12. Can you edit the flood watch if another product was issued using RIVERPRO after the flood watch went out?

13. Match product headers with hydro product:

Flood Watch	_____	A. GTFRVSGTF
All Public Outlooks	_____	B. GTFFLSGTF
Flash Flood Warning	_____	C. GTFESFGTF
Flood Warning	_____	D. GTFFFWGTF
Flash Flood Watch	_____	E. GTFFFAGTF

Urban and/or Small  
Stream Advisories \_\_\_\_\_  
All Follow-up  
Statements to Flood/  
Flash Flood Watches  
and Warnings \_\_\_\_\_  
All Routine Public  
Hydro Products \_\_\_\_\_
